4 steps to successful CLOUD MIGRATIONS

Discover

Discover your applications and their dependencies.
Scan your applications to determine their technologies. Scan your network to determine dependencies and usage.

Assess

What Applications do you have? Running on what platforms?
In this step, use leading edge tools and a consultative approach to understand your IT footprint.

When will you migrate? What are the dependencies?
Organize applications, servers and other resources into move groups and easily understand the impact when the scope invariably changes on you!

Plan

What can you automate? Can you handle an outage?
The rubber meets the road here! With a detailed assessment and plan in hand, you have everything you need to be successful!

Execute
